Gaastra W., Warren R., Boedeker E.C.;
Submitted (JAN-1994) to the ENBL/GenBank/DDBJ databases.
-:- FUNCTION: Fimbriae (also called pili), polar filaments radiating
from the surface of the bacterium to a length of 0.5-1.5
micrometers and numbering 100-300 per cell, enable bacteria to
colonize the epithelium of specific host organs.
                                                                                                                                                               This Swiss-Prot entry is copyright.
